WATER PRODUCTS

TOUGH CABLE

Heavy duty HO7RNF harmonised cables are used for both the 10 metre long power supply lead and float leads for long life in even the nastiest of dirty water.

DURABLE MOTOR

Designed for the task, the motor complies or exceeds all applicable Australian and European Electrical Standards. This includes the ability to be test run completely dry for extended periods with no damage.

PRECISION CASING

D15VA pump and motor shells are made from high grade engineered plastics and corrosion resistant 304 stainless steel to withstand the wear and tear of hard work.

METAL JACKETED CAPACITORS

The motor capacitor is vital for quick and reliable pump starting, so Davey use high grade metal jacketed capacitors to ensure dependable starting day after day, year after year.

4TH GENERATION SEALING

To ensure a reliable life, water must be kept from the inside of the motor. To do this the D15VA uses a first stage lip seal with a second stage hard face mechanical seal in an oil bath. And to make servicing easier the oil bath can be serviced from an access plug on the side of the pump.

SOLIDS HANDLER

D15VA's are true vortex pumps, with the impeller able to create a whirlwind like vortex in the pump housing, allowing the pumping of solids in suspension. These pumps even come with an agitator vent to help keep the water in the pit or tank moving, so that solids are less likely to settle before pumping.
